

Foreword

The long-awaited release of the Intel atom successor D945GCLF2 has started. There was much discussion about the new „Low Cost“ motherboard beforehand.

Not much has changed compared with the successor. D945GCLF2 got the new Intel Atom 330 CPU, which beats with 2 hearts: 2x 1,6 GHz. What the

new motherboard can do and as it stands its ground, we have tested for you in the form of benchmarks.

Specifications

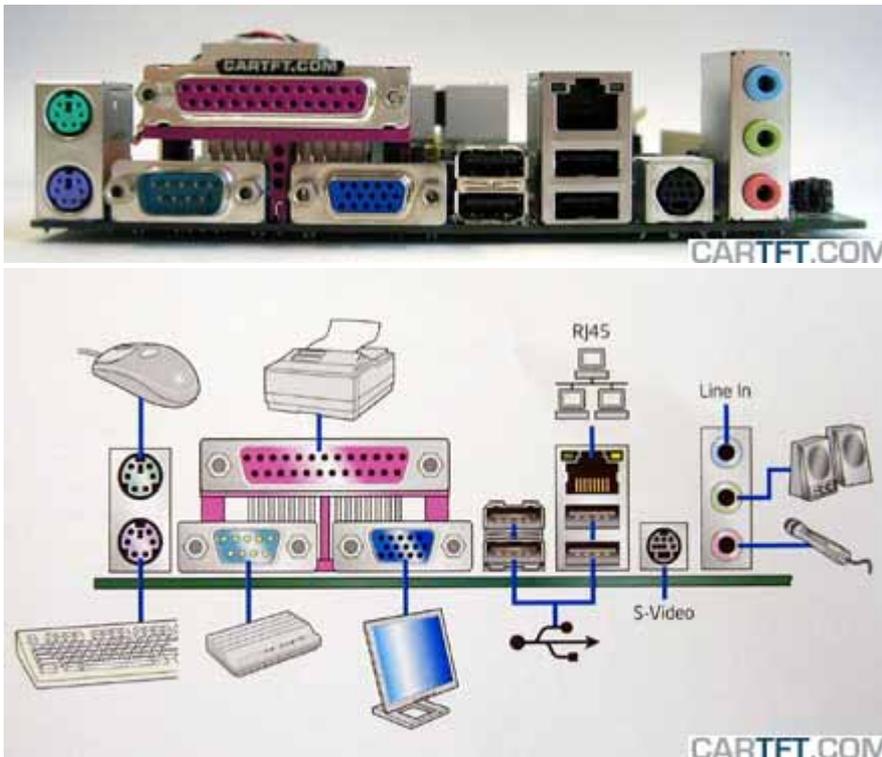

Model	Intel D945GCLF2
Type	Mini-ITX motherboard
CPU	Intel Atom 330 @ 2x 1.60GHz (Silverthorne 45nm), passive cooled
Chipset	i945GC/iCH7
GPU	Intel GMA 950
RAM	1x DDR2 667MHz
Display input	VGA
PCI	1x PCI
SATA	2x SATA
Audio	Realtek High Definition Audio
LAN	1x 1000Mbit
USB 2.0	4+4x USB 2.0
External I/O port	S-Video, 4x USB 2.0 PS2 keyboard/mouse, Parallel port, RJ45, COM Port, Line Out, Line In, Microphone
Internal I/O port	1x IDE, 1x PCI, 2x2 USB 2.0, Audio
Power supply	24 Pin ATX, P4 connector cable
Accessories and scope of supply	I/O panel, IDE cable, SATA cable, quick guide
Software	Drivers CD
Dimensions (Lenght x Width)	17cm x 17cm

Motherboard and connectivity

The layout of the board is kept very simple again and seems to come only with the most necessary things. On the whole everything you need is there and even still has got the one or other feature.

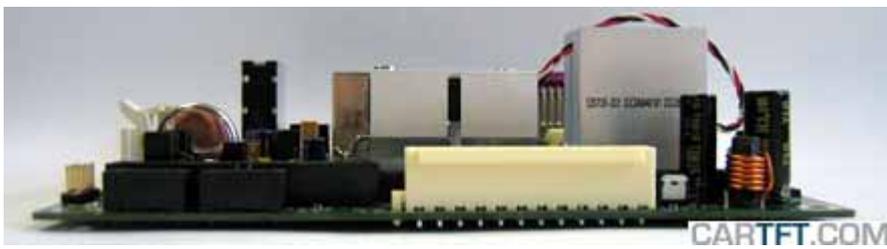

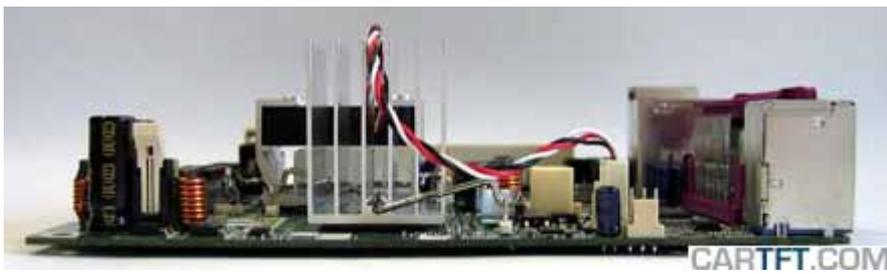

The most decisive difference is the CPU compared with the model of the successor, which owns 2 DIEs now and works with 2x 1.6GHz. The consumption of the CPU correspondingly increases to 8W. The cache doubled to 2x 512kb.

Additionally Intel upgrades the D945GCLF2 with Gigabit Ethernet, S-Video port and two internal USB2.0 ports instead of only one. Apart from that, everything of the connectivity will remain unaffected.

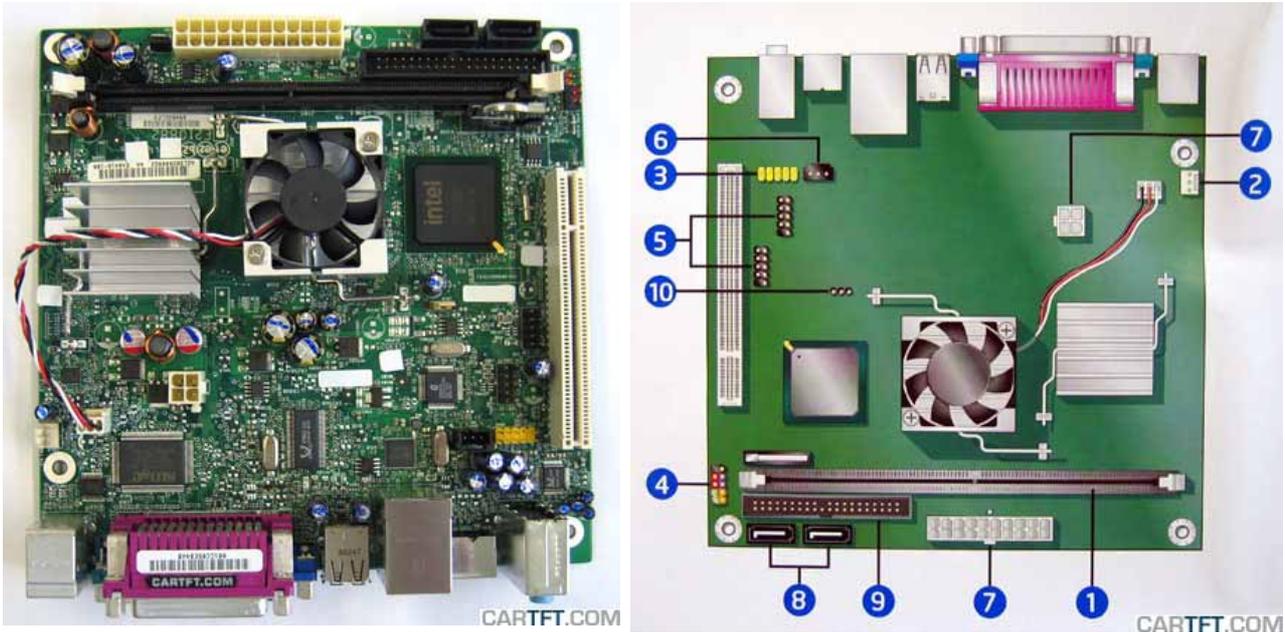

So the new Atom board is offering the following external connections: VGA port, PS2 for keyboard and mouse, COM port and serial port, four USB ports, RJ45, S-Video and the common audio connections.

You can connect an Audio front panel internally, IDE cable and a PCI card also beside the 2x2 USB ports mentioned.

CarTFT.com offers an replacement heatsink for the D945GCLF, which fits onto the D945GLCF2 so the board fits into the most usual mini ITX enclosures, too.

Installation, used hardware and operating

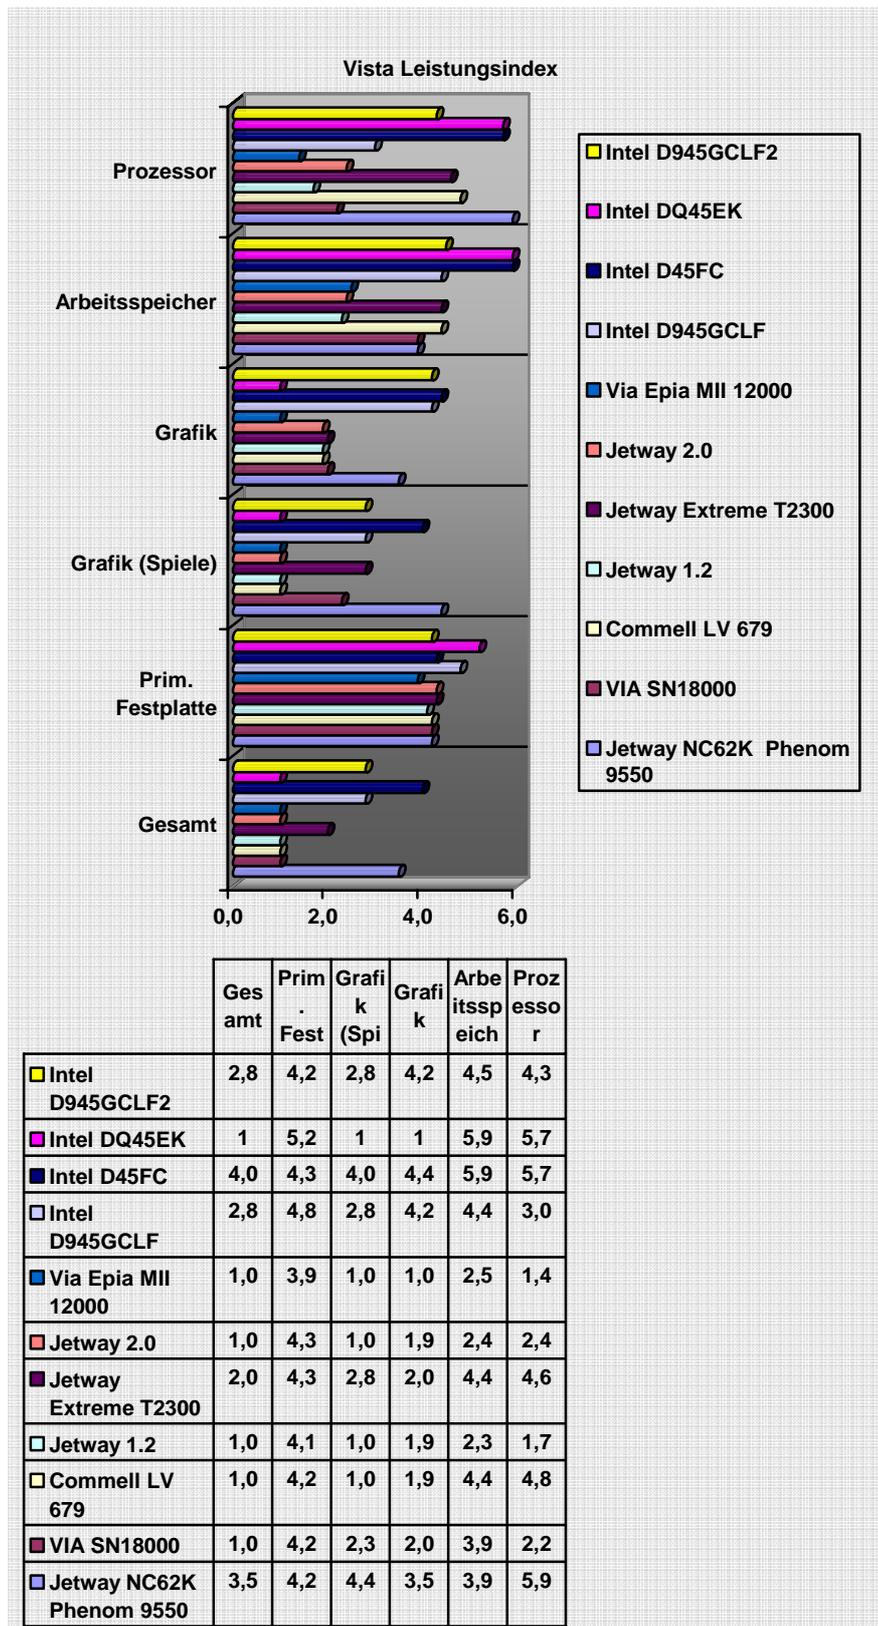

Following hardware is used in this test system:

- Intel D945GCLF2
- 1GiB DDR2 667 RAM by Aeon
- HDD 80 GiB SATA with 5400rpm by WD
- DVD R/RW-ROM by Pioneer
- M2-ATX supplied with a 84W AC adapter

Windows XP Professional and Windows Vista Ultimate 32bit were used as operating system for the tests. Several drivers to install made a very stable impression. But the performance wasn't that good compared with the predecessor. We had expected more. However, we must note, that this is no bluff package. The D945GCLF2 is what it is. The same chipset had been used as in the case of the D945GCLF and only the CPU had been upgraded. If you are working with programs, which are supporting multi core CPUs, the Atom 330 shows itself from a good side and profits from the two cores with 1.6GHz each.

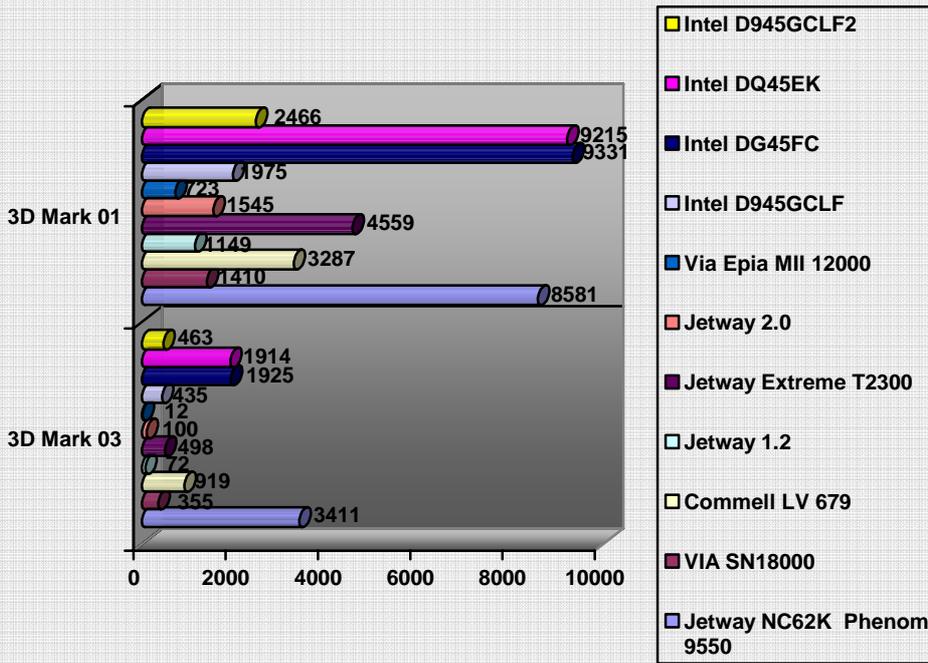

Performance, power consumption

The D945GCLF can distinguish only a bit in its performance compared with “equal“ motherboards. But it can join nowhere really, because the values of the benchmarks turn out too different.

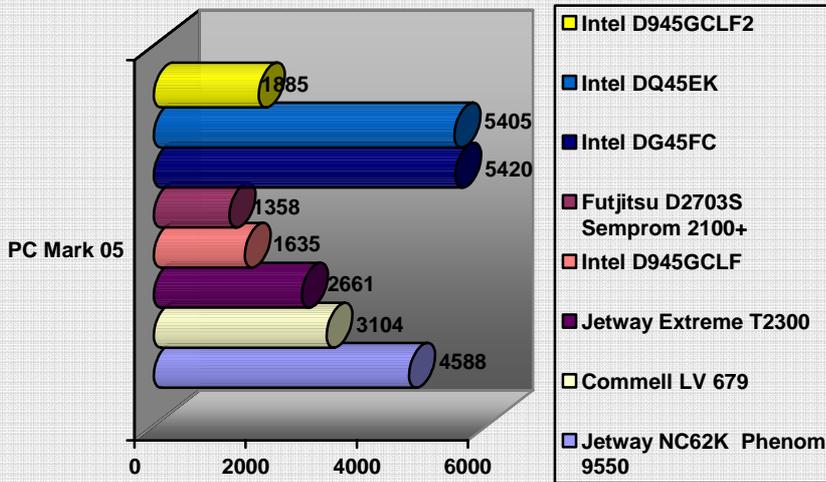

Primarily the comparison of the predecessor is interesting in this case. Despite same chipset the D945GCLF2 has little advantages. This is because of the quicker CPU.

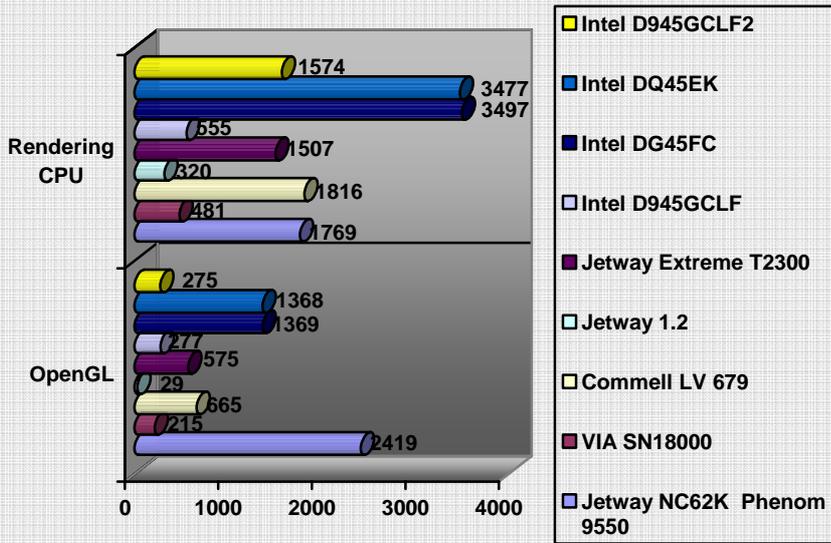

3D Mark

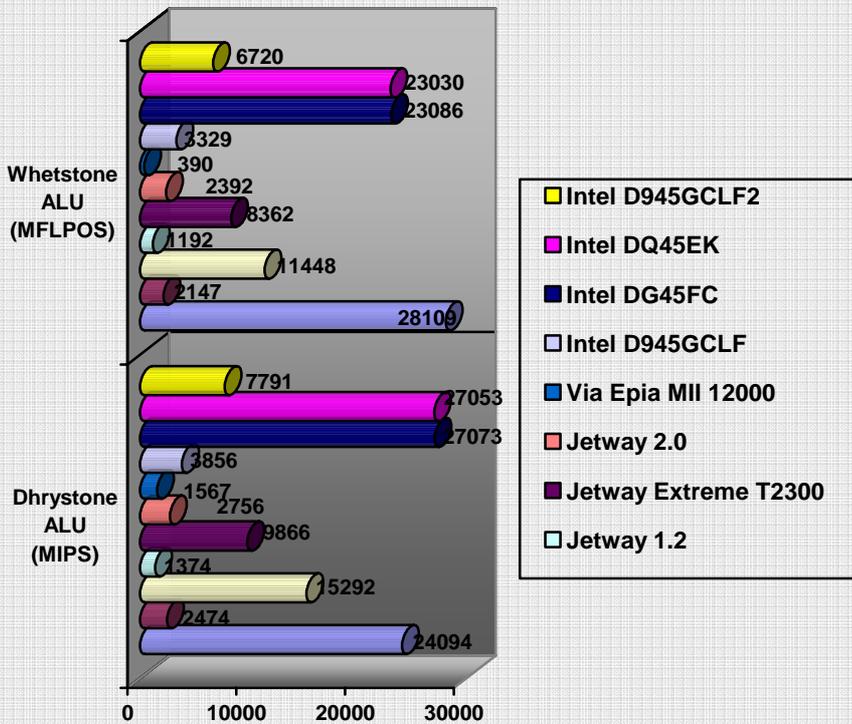

PC Mark 05

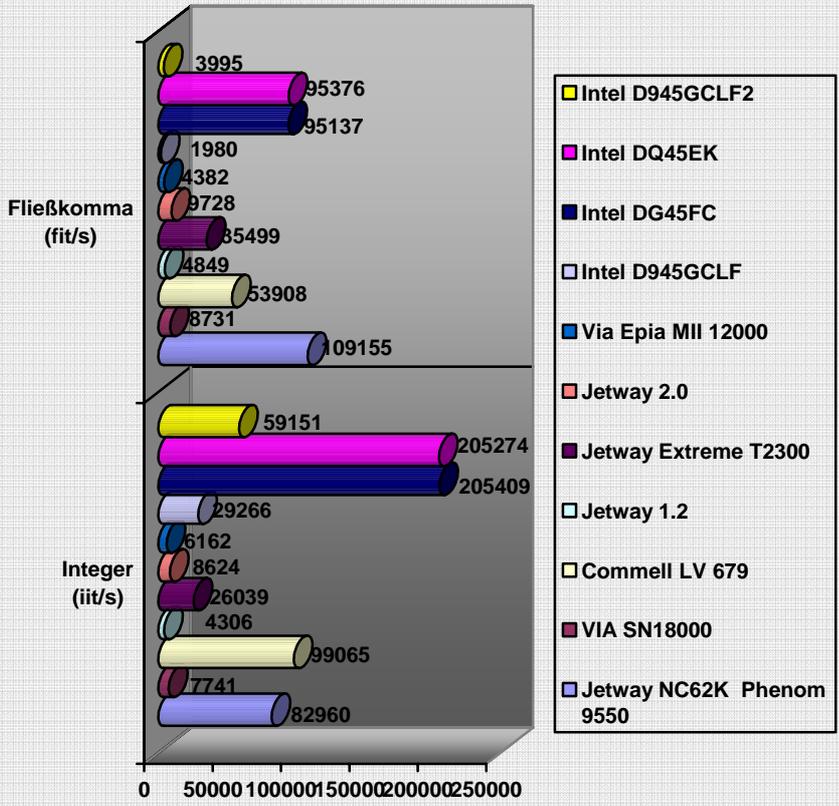

Cinebench R10

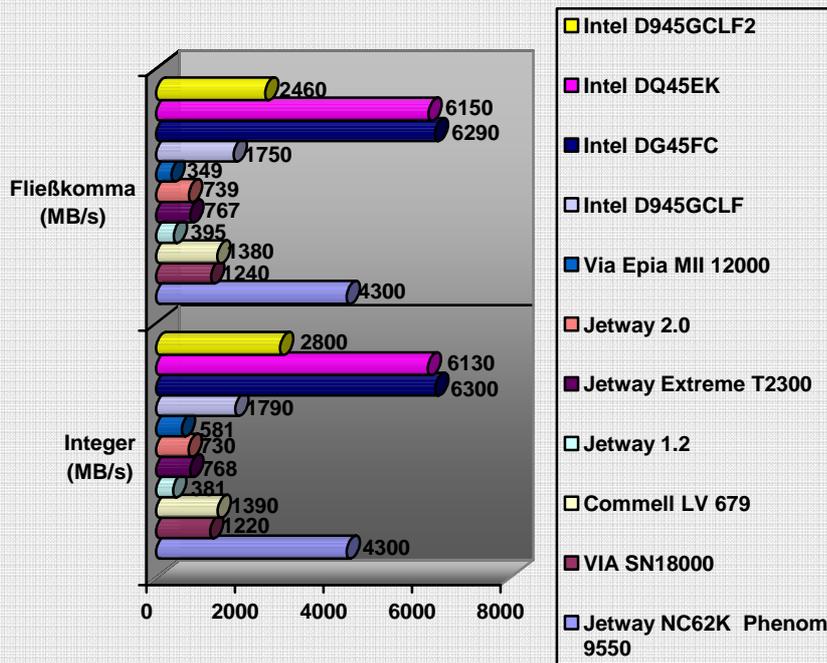

SiSoft Sandra CPU Arithmetik

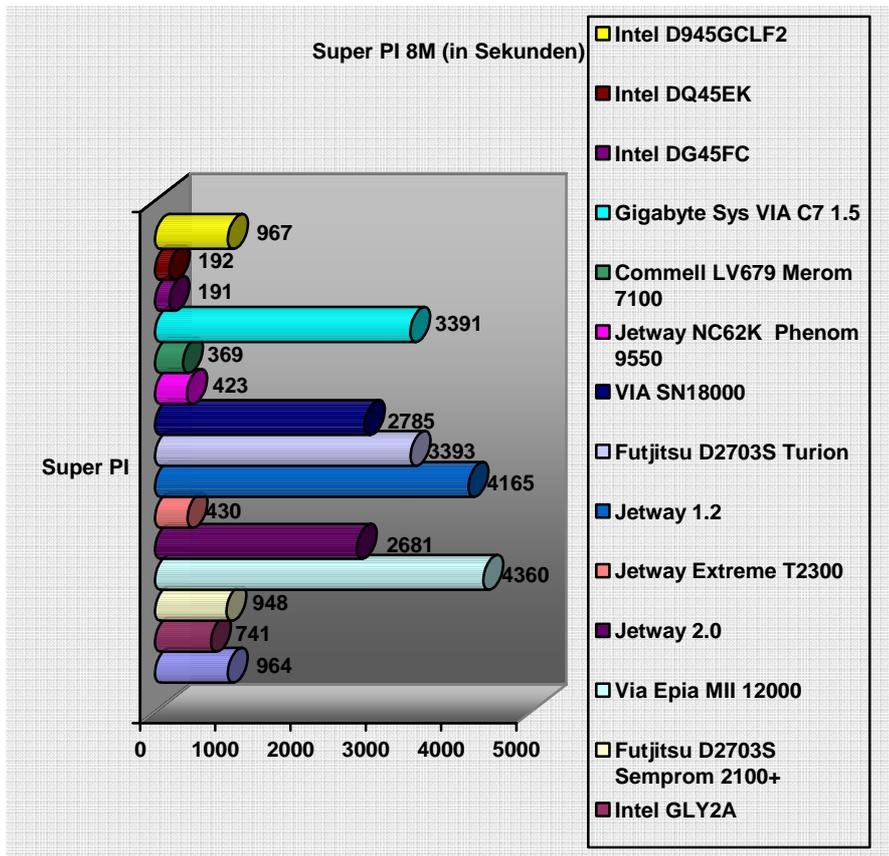

SiSoft Sandra CPU Multimedia

SiSoft Sandra Speicherbandbreite

We were a little disappointed of this super pi benchmark performance. Pure performance is in demand here and people would have been allowed to expect more from a multi core CPU. The value is to be classified as „completely properly“, if you draw however comparisons of the competition, you ask yourself, what lives at the performance. We assume it's the chipset, which is the bottleneck.

Power consumption

Boot	35W
Idle	32W
Load	38W
CD/DVD Load	44W
DVD	43W

Temperatures, noise level

In the area of temperature and noise levels the motherboard shows itself as extremely uncomplicated and quiet in operation. Because of the passive cooler of the CPU, only the chipset is cooled with a 30x30mm silent fan. The temperatures moved between 42°C Idle up to 45°C Load.

Conclusion

After noticing that nothing serious but the CPU has changed, it was clear not to expect too much of the D945GCLF2. You'll have advantages in the performance, if programs are supporting multi core and hyperthreading. The performance increase otherwise turns out rather marginal.

Intel has set at the customer wishes and obstructed an S-Video port at the I/O. Furthermore you can connect now 4 instead of heretofore 2 USB devices internally. If you want to upgrade for example Bluetooth and W-LAN internally, you do not have to make a compromise by giving away 2 USB ports, which are available in many enclosures.

All in all the whole package is very respectable and unbeatable in price (78.95 EUR incl. VAT) compared with the competitors.
